

KPV70-30A

比例流量控制阀 滑阀式

说明 DESCRIPTION

A solenoid operated, 3-way, 2-position, spool-type cartridge valve.

二位，三通，滑阀式电磁阀

工作 OPERATION

The KPV70-30A will regulate the flow of oil port 3, independent of the operating pressure of the system. As the current in the solenoid valve increases, the output flow of the KPV70-30A will also increase.

Emergency manual operation:

When starting: rotate clockwise about 1 turn to reach the starting point. Continue to rotate for about 5 more turns to reach the maximum displacement.

End: Rotate counterclockwise for about 6 cycles to a forward stop.

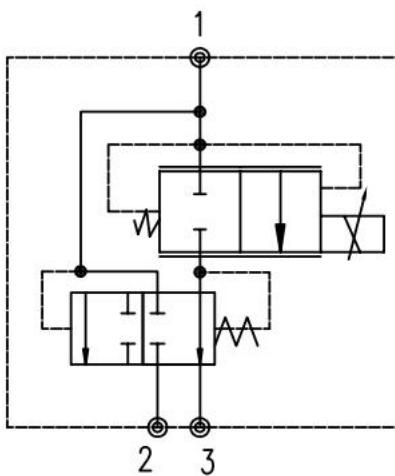

KPV70-30A将调节油口③的流量，不受系统工作压力的影响。随着电磁阀中电流的增大，KPV70-30A的输出流量也将增大。

应急手控操作：

启动时：顺时针旋转约 1 圈可达到起点。继续再旋转约5圈可以达到最大位移。

结束时：逆时针旋转约 6 周至正向停止。
